         NOVELTY - A learning contents service method is provided to store
         experiment or learning **modules** related to contents of a textbook
         at a database, and to enable a student and a teacher to
         simultaneously participate in the experiment or the learning by
         enabling the teacher to easily construct a learning environment so
         that it makes it possible performing a remote learning or
         monitoring.
         DETAILED DESCRIPTION - The method comprises steps of constructing
         an **education module** database(S31), offering information on the
         database to a teacher(S32), enabling the teacher to search for
         desired information in the database, to extract the searched
         information, to generate **education** contents via a modification or
         a compensation, and to transmit the generated **education** contents
         to a server(S33), storing the transmitted **education** contents at
         the database and giving a student a right to use the **education**
         contents(S34), enabling the student to receive the **education**
         contents, to use the **education** contents, and to transmit the usage
         result to the server(S35), enabling the server to store the usage
         result, to **assess** it by using an **education assessment**
         program, and to store the **assessment** result, or enabling the
         teacher to perform a real time monitoring in a case that the user
         receives a real time **education** over a network(S36), and modifying
         or compensating for controversial points found in performing the
         education(S37).(Dwg.1/10)
